Projects

Android

- O Easter Calculator calculates the date of Easter Sunday for a given year: source code | library
- O Sum of Primes generates lists of consecutive prime numbers that sum to a positive integer: source code
- O Tic-Tac-Toe is a game in which two players take turns marking spaces in a square grid with Xs and Os. The first player to succeed in placing their marks across an entire diagonal, horizontal, or vertical row wins: source code | library

Cloud Computing

- O Airplane Spotter leverages Azure AI Custom Vision to classify aircraft in images as a Boeing 787 or an Airbus A350: source code
- O Chamorro Dictionary Admin Console is a Java command-line interface (CLI) application that can be configured to use Azure SQL or Amazon DynamoDB as the backend database. Resources are deployed to AWS and Microsoft Azure using Terraform.
- O Serverless Applications is a collection of Python functions that can be deployed to AWS Lambda using Terraform.
- O Simple Calculator is a basic calculator that was developed using HTML and TypeScript, and deployed to an Amazon S3 bucket as a static website using Terraform. The Makefile can be used to build an image with Apache httpd to host the website: source code Java
- O Advent of Code is an annual collection of Christmas-themed code challenges that follow an Advent calendar. The solutions for 2024 are written in Java.
- O Blackjack is a JavaFX desktop game that uses the Spring Framework for dependency injection and TestFX for integration testing.
- O Chamorro Dictionary (source code) is a Spring Boot web application that fetches information about Chamorro words from an API (source code) that was developed using Spring Data JPA and Spring Data REST.
- O Chamorro Language Reference is a Swing desktop application in which a user can lookup and modify Chamorro words that are stored in an H2 database. MigLayout is used to lay out all the user interface (UI) components, including a searchable table.

- O dev-bjdelacruz-commons is a library that contains custom Swing UI components and various utility classes.
- O Flight Display is a JavaFX desktop application that displays information about flights arriving into or departing from an airport on a board similar to a flight information display system. Flight schedules for airports are fetched from the AirLabs Data API.
- O Hex Editor is a JavaFX desktop application that allows a user to change bits in a file up to a maximum size of 2.14 gigabytes, the highest value that a 32-bit signed integer can represent. The user can also view a file's hash values and also insert bytes (demo).
- O JLPT Word List is a Swing desktop application that retrieves information about Japanese words from a local SQLite database or a remote server on which the database resides.
- O OCMJD Bodgitt & Scarper is a Swing desktop application that was developed in 2012 as part of the requirements to fulfill the Oracle Certified Master Java SE 6 Developer certification. The application was upgraded in June 2024 to use Java 22 and JUnit 5.
- O Primes API (source code) is a Spring Boot web application that generates prime numbers for web clients. The bundled mini-game demonstrates how to use the API. The mini-game was developed using Tailwind CSS and pure JavaScript.
- O UdeMail is a JavaFX desktop email client that uses the Jakarta Mail API and allows a user to view emails, download attachments, send emails with attachments, and add multiple accounts. The Spring Framework is used for dependency injection.
- O Wordle is a JavaFX desktop game in which a player has six attempts to guess a five-letter word. Virtual threads are used to retrieve words, definitions, and parts of speech from WordsAPI. The Spring Framework is used for dependency injection.

Python (Flask)

- O Password Checker is a tool that ethical hackers can use to validate whether a computed MD5 or SHA256 hash of a password they acquired has been leaked. It uses the rockyou.txt wordlist and wordlists from CrackStation: source code
- O Weather Now! leverages an API from OpenWeather to fetch the latest weather data for a geographic location and the GPT-40 model from OpenAI to generate a fun response to the user: source code

Unity

O Super Sparty Bros. is a fun 2D platform game that can be played in a web browser: source code

Katas

A kata ($\mathfrak{P}^{\mathcal{T}}$) is a small coding exercise or challenge that is designed to help software developers improve their skills.
